Cylinder Head Cases - Transmission Trays

Costa Mesa, California. March 2009. Endural, an industry leader in vacuum-forming solutions has announced the release two new products, the Cylinder Head Case, and the Transmission Production Tray.

Cylinder Head Cases

The Cylinder Head Cases are a cost-effective solution to safely shipping remanufactured cylinder heads. Designed to be impervious to chemicals and solvents, these boxes are lightweight yet durable, fully shielding the valves and machined surfaces. Cores are easily shipped back in these protective boxes, which are then cleaned and ready for reuse.

“We have developed two new easy-to-handle boxes for transporting 4 cylinder, V-8, and 6 cylinder heads,” said Sue Williams, Vice President Sales & Marketing. “In the past, these components have been subject to damage. We’ve now solved that problem,” added Williams.

Transmission Production Trays

Also released by Endural are the Transmission Production Trays providing customers with a more efficient and lower cost alternative to moving heavy automobile transmissions down the production line. These durable, plastic reusable trays hold a variety of transmissions, and glide along a roller conveyor line. “There are a wide variety of production applications for this easy-to-use and money saving product designed for handling or transporting in-plant materials,” added Williams.

For more information about Endural’s new Cylinder Head Cases and the Transmission Production Trays, contact Sue Williams at 714-434-6533 ext. 201, or visit their Website at www.Endural.com.

Endural is an expert in [vacuum-forming solutions](#) for the automotive, aerospace, medical, electronics, food service, and materials handling industries. Located at 1685 Scenic Avenue in Costa Mesa, the technical team is ready to assist customers in solving material handling and transportation issues with high performance containers, trays, and pans.
