### Long Returnable Containers – Just In Time!

Costa Mesa, California. February 2009. Endural, an industry leader in vacuum-forming solutions has announced the release of their new [Long JIT Returnable Containers](#). These unique and durable containers are designed to hold long components and can be custom designed to fit most applications.

“We’ve seen a variety of products placed into these JIT containers, including automobile antennas, under car dash assemblies, appliance components and solar panels, to name just a few,” said Sue Williams, Vice President Sales and Marketing. “Moving products in these stacking containers provides easy and safe handling of ready to assemble parts. And because these containers eliminate packaging waste disposal problems, they pay for themselves quickly,” added Williams.

Offered in a number of standard sizes, or manufactured to custom specifications, these lightweight, yet rugged containers provide easy identification of company materials, and can be conveniently nested for return shipping back to the fabrication manufacturing plant.

[Endural](#) is an expert in vacuum-forming solutions for the automotive, aerospace, medical, electronics, food service, and materials handling industries. Located at 1685 Scenic Avenue in Costa Mesa, the technical team is ready to assist customers in solving material handling and transportation issues with high performance containers, trays, and pans. For more information about Endural and their new JIT Long Containers, contact Sue Williams at 714-434-6533 ext. 201, or visit their Website at [www.Endural.com](http://www.Endural.com).
